Motivation

- Theory Existing literature
 - Fiscal austerity literature in AMs
 - Front-loaded consolidation & no restructuring
 - Sovereign debt literature
 - Back-loaded consolidation & default/restructuring
- Data Three strategies
 - Front-loaded consolidation & no restructuring
 - Front-loaded consolidation & preemptive restructuring
 - Back-loaded consolidation & post-default restructuring
- Question How can we fill a gap between theory and data?

What We Do in This Paper

- Empirical, theoretical, and quantitative paper
- Empirics
 - Data on strategies of expenditure consolidation and restructurings
 - New stylized facts
- Theory
 - Sovereign debt model with preemptive and post-default restructurings and public capital
 - (i) front-loaded & preemptive, (ii) front-loaded & no restructuring
 - Choice between front- and back-loaded expenditure consolidation
- Quantitative analysis
 - Replication of the five stylized facts

Data: Debt Restructurings and Debt Distress

- Debt Restructurings Asonuma and Trebesch (2016)
 - 197 sovereign debt restructurings in 1975-2020
 - Post-default restructurings: 116 episodes
 - Preemptive restructurings: 81 episodes
- Non-restructuring Debt Distress New
 - 25 episodes in 1975-2020
 - High likelihood of restructurings
 - (i) EMBIG bond spreads
 - (ii) Estimated restructuring probability (probit regression)
 - No overlap with restructuring
 - Debt distress being cured (an interval of at least 2 years)

Data: Expenditure Consolidation

- Public expenditure composition data Asonuma and Joo (2021)
 - Consumption, transfers, investment and capital in 1975-2020
- Expenditure consolidation:
 - Alesina and Perotti (1997)- cyclically adjusted expenditure/GDP
 - Alternative classification expenditure / lagged GDP
 - Criteria:
 - 1) The indicator falls more than 1.5 percent
 - 2) It falls at least 1.25 percent a year in two consecutive years
- Front- and back-loaded expenditure consolidation
 - Front-loaded prior to start of restructuring (year t-2, or t-1)
 - Back-loaded after start of restructuring (year t, t+1,...)

Data: Strategies of Consolidation and Restructurings

• 8 strategies of expenditure consolidation and debt restructuring

- Post-default + back-loaded consolidation
- $\bullet \ \ \mathsf{Post-default} + \mathsf{front-loaded} \ \mathsf{consolidation} \\$
- Post-default + no consolidation
- $\bullet \ {\sf Preemptive} + {\sf back-loaded} \ {\sf consolidation} \\$
- Preemptive + front-loaded consolidation
- Preemptive + no consolidation
- Debt distress/no restructuring + front-loaded consolidation
- Debt distress/no restructuring + no consolidation
- 3 dominant strategies

• **Stylized Fact 1**: Three strategies of expenditure consolidation and debt restructuring are dominant

< □ > < □ > < □ > < □ > < □ > < □ >

8/47

- **Stylized Fact 2**: Public investment declines sharply ex ante in preemptive cases, while ex post in post-default cases
- **Stylized Fact 3**: Debt settlement takes place before recoveries in public investment in preemptive cases, while after in post-default cases

Asonuma & Joo (IMF and Surrey)

Expenditure Consolidation & Restructuring

(c) Non-restructuring Debt Distress

< □ > < □ > < □ > < □ > < □ > < □ >

10/47

• **Stylized Fact 4**: Recoveries in public investment are shorter in preemptive cases than in post-default cases

(日)

11 / 47

• Stylized Fact 5: Public consumption and transfers decline temporarily ex post and recover quickly in both cases

(b) Preemptive restructurings

< □ > < □ > < □ > < □ > < □ > < □ >

(c) Non-restructuring Debt Distress

A (1) × A (2) × A (2) ×

Main Questions

- Why front-loaded consolidation is associated with a preemptive restructuring, while back-loaded consolidation is associated with a post-default restructuring?
- Why is not more expenditure consolidation front-loaded, if it accompanies with quick debt resolution (i.e., preemptive)?

14 / 47

Literature Review

- Fiscal austerity (consolidation)
 - Alesina et al. (2019), Vegh et al. (2019), Guajardo et al. (2014)
 - Ours: Outcomes of two types of expenditure consolidation
- Sovereign debt/default and fiscal policy
 - Cuadra et al. (2010), Arellano and Bai (2017), Hatchondo et al. (forthcoming), Bianchi et al. (2020)
 - Ours: Front-loaded expenditure consolidation (i.e., prior to debt crises)
- Different types of sovereign defaults/debt restructurings
 - Arellano et al. (2019), Hatchondo et al. (2014), Asonuma and Trebesch (2016)
 - Ours: Joint choice on expenditure consolidation and restructuring

Theoretical Findings

- Preemptive restructurings take place when probability of future default is high
 - Creditors accept debt relief because it increases expected repayment
 - move to the "good side (upward sloping) of the debt Laffer curve"
- Preemptive restructurings
 - are predictable, so public investment starts falling earlier on (front-loaded) resulting in larger effective costs of default.
 - associate with smaller TFP losses, so public investment does not fall afterward (quick recovery)
- Defaults/post-default restructurings take place when there is a large, unexpected negative TFP shock
 - *Why unexpected?* because otherwise there would have been a preemptive restructuring before the shock
- Defaults/Post-default restructurings
 - are unpredictable, so public investment does not start falling earlier on
 - associate with larger TFP losses, so public investment falls sharply (back-loaded)

16 / 47

Model: General Features

- Sovereign debt in a dynamic small open economy model:
 - Endogenous ex ante choice of preemptive option and passing it
 - Endogenous ex post choice of default and repayment
 - Endogenous choice of settlement and delays conditional on preemptive option and default
 - Endogenous choice of public expenditure (i.e., consolidation)—public consumption, investment, transfers and debt repayments
 - Endogenous production with labor and public capital

Model: General Features

- A risk averse sovereign debtor, a household, a private firm and risk-neural foreign creditors
- A stochastic TFP shock a_t
- Distortionary consumption tax and no lump-sum tax
- Credit record h_t : indicating status of market access
- Incomplete capital market: one-period zero-coupon bonds
- One-side commitment
- Two types of debt renegotiations:
 - Preemptive multi-round before TFP realization
 - Post-default multi-round after TFP realization

Model: Timing

Model: Household's Problem

Household maximization problem

$$\max_{c_t,l_t} E_0 \sum_{t=0}^{\infty} \beta^t U(c_t, l_t, g_t)$$

s.t.
$$(1+\tau)c_t = w_t l_t + \pi_t^F + T_t$$
 (1)

where $U(c_t, l_t, g_t) = (1 - \omega)u(c_t, l_t) + \omega v(g_t)$

• Optimality condition of household

$$\frac{u_l(c_t, l_t)}{u_c(c_t, l_t)} = \frac{w_t}{1 + \tau}$$

$$\tag{2}$$

Asonuma & Joo (IMF and Surrey) Expenditure Consolidation & Restructuring July

э

Model: Firm's Problem

Production function

$$y_t = a_t (I_t)^{\alpha_l} (k_t^g)^{\alpha_k} (\bar{k^p})^{1-\alpha_l-\alpha_k}$$
(3)

• Private firm's profit maximization problem:

$$\max_{l_t} \pi_t^F = a_t (l_t)^{\alpha_l} (k_t^g)^{\alpha_k} (\bar{k^p})^{1-\alpha_l-\alpha_k} - w_t l_t$$
(4)

• $\bar{k^p}$ is numeraire (Mendoza and Yue 2012)

• Optimality condition of the private firm

$$w_t = \alpha_I a_t (I_t)^{\alpha_I - 1} (k_t^g)^{\alpha_k} (\bar{k^p})^{1 - \alpha_I - \alpha_k}$$
(5)

Model: Sovereign's Problem - Ex Ante

• Ex ante value of sovereign

$$V^{EXANTE}(b_t, k_t^g, 0, a_{t-1}) = max[V^{PRE}(b_t, k_t^g, 0, a_{t-1}), V^{NON_PRE}(b_t, k_t^g, 0, a_{t-1})]$$
(6)

• Ex ante value of taking a preemptive restructuring

$$V^{PRE}(b_t, k_t^g, 0, a_{t-1}) = \max_{g_t, k_{t+1}^g, T_t} \int_A [(1-\omega)u(c_t, l_t) + \omega v(g_t) + \beta \Psi(b_t, k_{t+1}^g, 1, a_t)] d\mu(a_t|a_{t-1})$$
(7)

s.t.
$$g_t + k_{t+1}^g + T_t = \tau c_t + (1 - \delta^k)k_t^g - \frac{\Omega}{2}(\frac{k_{t+1}^g - k_t^g}{k_t^g})^2 k_t^g$$
 (8)

$$T_t \ge 0$$
 (9)

・ 同 ト ・ ヨ ト ・ ヨ ト …

$$\frac{u_l(c_t, l_t)}{u_c(c_t, l_t)} = \frac{\alpha_l \hat{a}_t(l_t)^{\alpha_l - 1} (k_t^g)^{\alpha_k} (\bar{k^p})^{1 - \alpha_l - \alpha_k}}{1 + \tau}$$
(10)

$$(1+\tau)c_t = \hat{y}_t + T_t \tag{11}$$

Model: Sovereign's Problem - Ex Ante

• Ex ante value of passing a preemptive option

$$V^{NON_PRE}(b_t, k_t^g, 0, a_{t-1}) = \int_A V(b_t, k_t^g, 0, a_t) d\mu(a_t | a_{t-1})$$
(12)

• Preemptive restructuring choice $PRE(b_t, k_t^g, 0) = \{a_{t-1} \in A : V^{PRE}(b_t, k_t^g, 0, a_{t-1}) \ge V^{NON_PRE}(b_t, k_t^g, 0, a_{t-1})\}$ (13)

Model: Sovereign's Problem - Ex Post

• Ex post value of sovereign

$$V(b_t, k_t^g, 0, a_t) = max[V^R(b_t, k_t^g, 0, a_t), V^D(b_t, k_t^g, 0, a_t)]$$
(14)

• Ex post value of repayment

$$V^{R}(b_{t}, k_{t}^{g}, 0, a_{t}) = \max_{g_{t}, b_{t+1}, k_{t+1}^{g}, T_{t}} (1 - \omega) u(c_{t}, l_{t}) + \omega v(g_{t}) + \beta \int_{A} V(b_{t+1}, k_{t+1}^{g}, 0, a_{t+1}) d\mu(a_{t+1}|a_{t})$$
(15)

s.t. (9) and
$$g_t + k_{t+1}^{g} + T_t + q(b_{t+1}, k_{t+1}^{g}, 0, a_t)b_{t+1} = \tau c_t + (1 - \delta^k)k_t^g - \frac{\Omega}{2}(\frac{k_{t+1}^g - k_t^g}{k_t^g})^2 k_t^g + b_t$$
(8a)

$$\frac{u_l(c_t, l_t)}{u_c(c_t, l_t)} = \frac{\alpha_l a_t(l_t)^{\alpha_l - 1} (k_t^g)^{\alpha_k} (\bar{k^\rho})^{1 - \alpha_l - \alpha_k}}{1 + \tau}$$
(10a)

 $(1+\tau)c_t = y_t + T_t \tag{11a}$

3

Model: Sovereign's Problem - Ex Post

• Ex post value of defaulting (post-default restructuring)

$$V^{D}(b_{t}, k_{t}^{g}, 0, a_{t}) = \max_{g_{t}, k_{t+1}^{g}, T_{t}} (1 - \omega) u(c_{t}, l_{t}) + \omega v(g_{t}) + \beta \int_{A} V((1 + r^{*})b_{t}, k_{t+1}^{g}, 2, a_{t+1}) d\mu(a_{t+1}|a_{t})$$
(16)

s.t. (8), (9) and

$$\frac{u_l(c_t, l_t)}{u_c(c_t, l_t)} = \frac{\alpha_l \tilde{a}_t(l_t)^{\alpha_l - 1} (k_t^g)^{\alpha_k} (\bar{k}^p)^{1 - \alpha_l - \alpha_k}}{1 + \tau}$$
(14a)

$$(1 + \tau)c_t = \tilde{y}_t + T_t$$
(15a)

Default/post-default restructuring choice

$$D(b_t, k_t^g, 0) = \{a_t \in A : V^R(b_t, k_t^g, 0, a_t) < V^D(b_t, k_t^g, 0, a_t)\}$$
(17)

イロト イポト イヨト イヨト 二日

Model: Renegotiation Problem

- Preemptive vs. post-default renegotiations
 - Symmetric in bargaining game and power
 - Timing: Prior to vs. after TFP realization
 - Sovereign's outside options: Non-preemptive option vs. permanent autarky
 - Creditors' outside options: Ex ante expected return vs. zero recovery rates
- Strategies of the proposer *i* and the other party *j* (for *i*, *j* = *B*, *L*) depending on state, current offer and types of debt renegotiations:
 - Post-default renegotiations

 $\begin{aligned} \theta_i &= \{1 \quad (propose)\} \quad \& \quad \theta_j &= \{1 \quad (accept)\} \\ \theta_i &= \{0 \quad (pass)\} \quad \& \quad \theta_i &= \{0 \quad (reject)\} \end{aligned}$

• Preemptive renegotiations

Model: Post-default Renegotiation

- Case when the borrower B is the proposer
- If B proposes and the proposal is accepted,

$$V^{PRO}(b_t, k_t^g, 2, a_t) = \max_{g_t, k_{t+1}^g, T_t} (1 - \omega) u(c_t, l_t) + \omega v(g_t) + \beta \int_A V(0, k_{t+1}^g, 0, a_{t+1}) d\mu(a_{t+1}|a_t)$$
(22)

s.t. (9), (10b), (11b) and $g_t + k_{t+1}^g + T_t = \tau c_t + (1 - \delta^k) k_t^g - \frac{\Omega}{2} \left(\frac{k_{t+1}^g - k_t^g}{k_t^g}\right)^2 k_t^g + \alpha_t^B b_t \qquad (8b)$

$$V^{*ACT}(b_t, k_t^g, 2, a_t) = -\alpha_t^B b_t$$
⁽²³⁾

27 / 47

Model: Post-default Renegotiation (cont.)

• If B passes,

$$V^{PASS}(b_{t}, k_{t}^{g}, 2, a_{t}) = \max_{g_{t}, k_{t+1}^{g}, T_{t}} (1 - \omega) u(c_{t}, l_{t}) + \omega v(g_{t}) + \beta \int_{A} V((1 + r^{*})b_{t}, k_{t+1}^{g}, 2, a_{t+1}) d\mu(a_{t+1}|a_{t}) \quad (24)$$

s.t. (8), (9), (10b), and (11b)
$$V^{*REJ}(b_{t}, k_{t}^{g}, 2, a_{t}) = \frac{1}{1 + r^{*}} \int_{A} \Gamma^{*}((1 + r^{*})b_{t}, k_{t+1}^{g}, 2, a_{t+1}) d\mu(a_{t+1}|a_{t})$$
(25)

(35)

 $s.t. \ V^{*ACT}(b_t, k_t^g, 1, a_{t-1}) \ge (1 - p^D(b_t, k_t^g, 0, a_{t-1})) + p^D(b_t, k_t^g, 0, a_{t-1})\gamma(b_t, k_t^g, 2, a_{t-1}))$ (36)
(36)
Asonuma & Joo (IMF and Surrey) Expenditure Consolidation & Restructuring July 21, 2022 30 / 47

If B passes,

$$V^{PASS}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = \max_{g_{t}, k_{t+1}^{g}, T_{t}} \int_{A} [(1-\omega)u(c_{t}, l_{t}) + \omega v(g_{t}) + \beta \int_{A} \Psi(b_{t}, k_{t+1}^{g}, 1, a_{t})] d\mu(a_{t}|a_{t-1})$$
(37)

s.t. (8) (9) (10) (11) and

$$V^{PASS}(b_t, k_t^g, 1, a_{t-1}) \ge V^{NON - PRE}(b_t, k_t^g, 0, a_{t-1})$$
 (34a)

$$V^{*REJ}(b_t, k_t^g, 1, a_{t-1}) = \frac{1}{1+r^*} \int_A \Psi^*(b_t, k_t^g, 1, a_t) d\mu(a_t|a_{t-1})$$
(38)

s.t. $V^{*REJ}(b_t, k_t^g, 1, a_{t-1}) \ge (1 - p^D(b_t, k_t^g, 0, a_{t-1})) + p^D(b_t, k_t^g, 0, a_{t-1})\gamma(b_t, k_t^g, 2, a_{t-1}))$ (36a)

If B quits,

$$V^{QUIT}(b_t, k_t^g, 1, a_{t-1}) = V^{NON_PRE}(b_t, k_t^g, 0, a_{t-1})$$
(39)

▲□▶ ▲□▶ ▲□▶ ▲□▶ □ ののの

$$V^{*REJ_QUIT}(b_t, k_t^g, 1, a_{t-1}) = (1 - p^D(b_t, k_t^g, 0, a_{t-1})) + p^D(b_t, k_t^g, 0, a_{t-1})\gamma(b_t, k_t^g, 2, a_{t-1}))$$
(40)

• Equilibrium

$$\delta_{t}^{B*} = \operatorname{argmax} V^{PRO}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$

s.t. $V^{PRO}(b_{t}, k_{t}^{g}, 1, a_{t-1}) \geq V^{PASS}(b_{t}, k_{t}^{g}, 1, a_{t-1})$
 $V^{*ACT}(b_{t}, k_{t}^{g}, a_{t-1}) \geq V^{*REJ}(b_{t}, k_{t}^{g}, a_{t-1})$ (41)

If both parties reach an agreement,

$$\Psi^{B}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{PRO}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$
$$\Psi^{B*}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{*ACT}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$
(42)

Otherwise,

$$\Psi^{B}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{PASS}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$

$$\Psi^{B*}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{*REJ}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$
(42a)

or

$$\Psi^{B}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{QUIT}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$

$$\Psi^{B*}(b_{t}, k_{t}^{g}, 1, a_{t-1}) = V^{*REJ_{PRE}}(b_{t}, k_{t}^{g}, 1, a_{t-1})$$
(42b)

• Settlement set for preemptive renegotiation

$$R^{B}(b_{t}, k_{t}^{g}, 1) = \left\{ \begin{array}{c} a_{t-1} \in A : V^{PRO}(b_{t}, k_{t}^{g}, 1, a_{t-1}) \ge V^{PASS}(b_{t}, k_{t}^{g}, 1, a_{t-1}) \\ V^{*ACT}(b_{t}, k_{t}^{g}, 1, a_{t-1}) \ge V^{*REJ}(b_{t}, k_{t}^{g}, 1, a_{t-1}) \end{array} \right\}$$

Quantitative Analysis - Parameters

• TFP - AR(1) process:

$$\log(a_t) = \rho \log(a_{t-1}) + \epsilon_t, \tag{54}$$

• Household utility function - GHH, CRRA:

$$u(c_t, l_t) = \frac{(c_t - \frac{l_t^{1+\psi}}{1+\psi})^{1-\sigma}}{1-\sigma}, \qquad v(g_t) = \frac{g_t^{1-\sigma_g}}{1-\sigma_g}$$
(55)

Parameter	Value	Source			
Risk aversion for private consumption	$\sigma = 3$	Hatchondo et al. (forthcoming)			
Risk aversion for public consumption	$\sigma_g = 3$	Hatchondo et al. (forthcoming)			
Labor elasticity	$\psi = 0.48$	Mendoza (1991)			
Risk-free interest rate	$r^{*} = 0.01$	Aguiar et al. (2016), Yue (2010) - US Treasury bill rate			
Public capital depreciation rate	$\delta^k = 0.04$	US BEA (1999)			
Direct productivity loss (post-default)	$\lambda_d = 0.05$	Asonuma and Trebesch (2016) - Computed (ARG)			
Direct productivity loss (preemptive)	$\lambda_p = 0.04$	Asonuma and Trebesch (2016) - Computed (URY)			
Country-specific parameters					
Weight on public consumption	$\omega = 0.80 \; (ARG)/0.80 \; (URY)$	Computed (ARG/URY)			
Labor income share	$\alpha^{l} = 0.64 \text{ (ARG)}/0.58 \text{ (URY)}$	Gordon and Guerron-Quintana (ARG)/Computed (URY)			
Public capital income share	$\alpha^{k} = 0.058 \text{ (ARG)}/0.11 \text{ (URY)}$	Computed (ARG/URY)			
Effective consumption tax rate	$\tau = 0.33 (ARG)/0.33 (URY)$	Computed - IMF WEO (ARG/URY)			
Public capital adjustment costs	$\Omega = 10 (ARG)/10 (URY)$	Computed (ARG/URY)			
Auto-correlation of productivity shock	$\rho = 0.85 (ARG) / 0.90 (URY)$	Computed - MECON (ARG)/ BCU (URY)			
Standard deviation of productivity shock	$\sigma^a = 0.017 \text{ (ARG)} / 0.015 \text{ (URY)}$	Computed - MECON (ARG)/ BCU (URY)			
Bargaining power	$\phi = 0.93 (ARG)/0.70 (URY)$	Computed (ARG/URY)			
Discount rate	$\beta = 0.80 \text{ (ARG)}/0.80 \text{ (URY)}$	Computed (ARG/URY)

• Strategies of expenditure consolidation and debt restructuring

Public investment around debt restructuring and debt distress

• Recoveries in public investment and restructuring duration

(a) Post-default Restructuring (Argentina) (b) Preemptive Restructurings (Uruguay)

イロト 不良 トイヨト イヨト

 Public Consumption and Transfers around Restructurings and Debt Distress

Two Key Determinants

• Role of preemptive restructuring choice and public capital

Asonuma & Joo (IMF and Surrey) Expenditure Consolidation & Restructuring

Conclusion

- New data and stylized facts on expenditure consolidation and debt restructurings
- New theoretical explanation on sovereign debt crises and resolution
 - Choice between front- and back-loaded consolidation
 - Role of two types of expenditure consolidation in sovereign debt crises and resolution
- Quantitative analysis of model rationalizes the stylized facts
